

SoundSense QB Track System

SoundSense QB material is used for many industrial applications. In this case we use a specifically designed track system to hang QB curtains around a specific piece of equipment or space. The versatility of these track systems give us the ability to custom make a system to fit your needs.

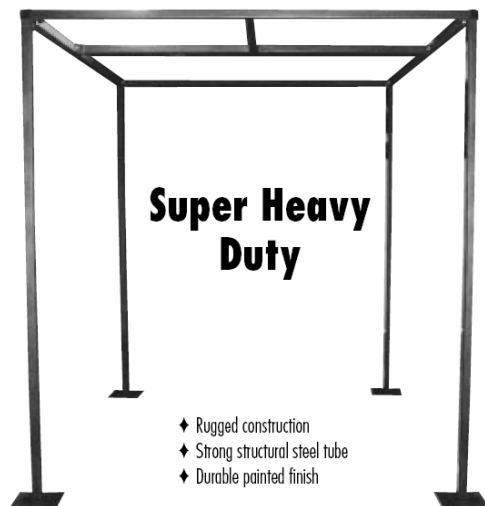

Applications:

- Noisy Equipment Enclosures
- Enclosing Entire Rooms
- Creating Acoustic Enclosures with Access Doors

Installation:

QB Track System installations depend solely upon each individual setup. Once you have determined the space to be enclosed, a track system is designed specifically for that space. The track is constructed based on instructions that are provided with each setup. Once the track is in place, the QB curtains are either Velcroed or bolted into place, or attached to trolleys and slid into place.

Physical Properties:

Typical Track System

Track Gauge:	16 gauge – 12 gauge
Track Size:	1 ¼" square stock
Maximum Height:	12 feet
Maximum Span:	8 feet

Heavy Duty Track System

Track Gauge:	3/16" thick
Track Size:	2 ½" square stock
Maximum Height:	Depends On Application
Maximum Span:	Depends On Application
